## Project Design Phase-II Solution Requirements (Functional & Non-functional)

| Date          | 03 October 2022                              |
|---------------|--|
| Team ID       | PNT2022TMID28405                             |
| Project Name  | Estimation of crop yield and data analytics. |
| Maximum Marks | 4 Marks                                      |

## **Functional Requirements:**

Following are the functional requirements of the proposed solution.

| FR No. | Functional Requirement (Epic) | Sub Requirement (Story / Sub-Task)                       |
|--------|-------------------------------|--|
| FR-1   | User Requirement              | Knowledge of seeds , crops ,mechanism ,soil ,climate     |
|        |                               | & agriculture science. Right use of resources like soil  |
|        |                               | andwater. Time management .Market demand drive           |
|        |                               | production.  |
| FR-2   | User Business rules           | Three laws - the farmers produce trade and               |
|        |                               | commerce(promotion and facilitation)act ,the farmers     |
|        |                               | agreement of price assurance and farm services act and   |
|        |                               | the essential commodities act                            |
| FR-3   | User Factors                  | Crop prediction is highly sensitive to climate. It is    |
|        |                               | affected by long-term trend in average rainfall and      |
|        |                               | temperature, interannual climate variability, shocks     |
|        |                               | during specific phonological stages and extreme          |
|        |                               | weather events.  |
| FR-4   | User Importance               | Crop yield estimates constituted a particular            |
|        |                               | importantproductivity metric, both an aggregate level    |
|        |                               | as well asin plot-level productivity analysis and impact |
|        |                               | evaluations of new technologies and policy               |
|        |                               | interventions.   |
| FR-5   | User Objectives               | Formulation and implementation of policies and           |
|        |                               | programmed aimed at achieving rapid agricultural         |
|        |                               | growth through optimum utilization of land, water, soil  |
|        |                               | and plant resources of the state.                        |
| FR-6   | User Improvement              | It becomes necessary to increase the crop variety to     |
|        |                               | produce disease-resistance offspring of the crops. It    |
|        |                               | also helps in providing better and superior varieties    |
|        |                               | based on the quality and quantity of the yield.          |

## **Non-functional Requirements:**

Following are the non-functional requirements of the proposed solution.

| FR No | Non-Functional Requirement | Description  |
|-------|----------------------------|--|
|       | Usability                  | To empower farmers and to increase the               |
| NFR-1 |                            | productivity there is need to provide the best       |
|       |                            | dissemination tool for their farming activities.     |
| NFR-2 | Security                   | The developed ICT agriculture tools focus on very    |
|       |                            | important agricultural services such as crop         |
|       |                            | detection ,crop predictor will help farmers to make  |
|       |                            | decision in future.                                  |
| NFR-3 | Reliability                | This will remove multilingual issues and bridge the  |
|       |                            | gap between farmers and technology. Effective tool   |
|       |                            | that all farmers can use for management of all kind  |
|       |                            | of crops   |
| NFR-4 | Performance                | Multiple technologies and services that will improve |
|       |                            | the usability in agricultural activities.            |
| NFR-5 | Availability               | Both website and mobile application interface and    |
|       |                            | developed in local language and the content is       |
|       |                            | available in localized language                      |
| NFR-6 | Scalability                | i)Increased productivity from warm temperature       |
|       |                            | ii) Decreased moisture stress                        |
|       |                            | iii)Possibility of growing new crops                 |
|       |                            | iv)Productivity of soil and water                    |
